# INFOSEC IQ

Power to your people.

OFMQ's new platform provides your employees with the knowledge and skills to stay cybersecure at work and home. With phishing simulations and hundreds of awareness and training resources, you'll have everything you need to prepare employees to detect, report and defeat cybercrime. Every aspect of the platform can be customized and personalized to match your organization's culture and employees' learning styles.

Security awareness & training for everyone.

Personalize employee training with role-based modules in a variety of themes, styles and lengths to engage learners

Automate phishing simulations, training cadence and delivery to keep lessons relevant, challenging and fun — and save you time

Integrate with your endpoint protection, LMS and SOC to streamline program management, reporting and attack response

Analyze employee risk scores, learning outcomes and reported phishing threats to anticipate — and remediate — cyberthreats

Improve your program with actionable dashboard data, helping you fill compliance training gaps and educate high-risk employees

Personalize · Automate · Integrate · Analyze · Improve

OFMQ
ADVANCING **QUALITY** » IMPROVING LIVES
700+ training resources

1,000+ phishing & data entry templates

34+ supported languages

7+ endpoint protection integrations

INFOSEC IQ

# Multi-layered security awareness training

Inspire cybersecurity behavior change

Go beyond annual training by inspiring behavior change and a culture of security. Choose from our library of 700+ resources and pre-built training kits to layer training and keep learners engaged year round. Assign training with different lengths and styles to match your organization's culture and deliver relevant content to every member of your organization.
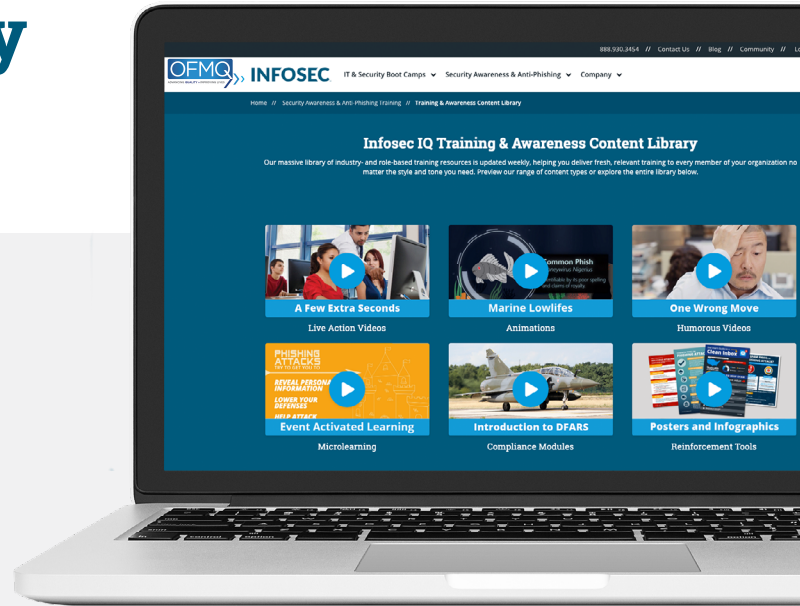

Deliver the right training to the right employees, when it matters most

Educate employees based on their role, security aptitude and preferred learning style. Utilize dynamic groups to personalize education based on lesson retention and deliver training when employees fail assessments, click phishing simulations or trigger security events.
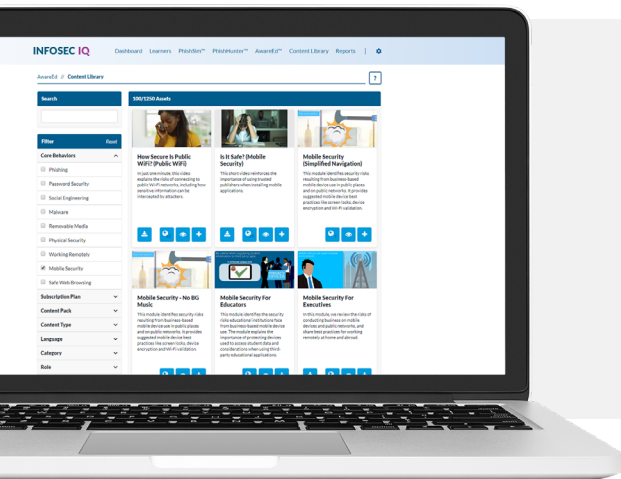

Stay compliant with training aligned with NIST guidelines

Fortify your security awareness curriculum with compliance and industry-based training. Each training module is mapped to one of nine core security behaviors derived from the NIST security awareness and training guidelines to help guide your curriculum.

Custom-fit education matched to your culture

Use the Publishing Assistant to build your own training modules matched to your culture. Create custom assessments to measure retention of security topics that matter most to your organization.

INFOSEC IQ™

Reduce phishing susceptibility with phishing simulations

1,000+ realistic & customizable templates

Choose from over 1,000 editable templates or create custom emails to teach employees how to avoid real threats in your environment. New templates are added weekly to address topical phishing attacks and keep training relevant.

Turn phishing clicks into teachable moments

Deliver training the moment your employee clicks a phishing link. Highlight phishing red flags or share educational modules to deliver training in the teachable moment and reinforce good security habits.

Set rules to automatically deliver the most relevant training

Sync with Active Directory and use segmentation rules to automatically deliver the most relevant phishing simulations based on learner location, language, risk score or any custom learner value.

Simulate the most sophisticated attacks

Prepare your employees for the most challenging threats they face by simulating the same spoofing techniques, typosquatting and attack types scammers use.

Suspicious email reporting and automated analysis

Enable employees to report suspicious emails with the PhishNotify™ reporting plugin. Use PhishHunter™ to automatically analyze employee-reported emails to quickly detect threats and orchestrate attack response.

Simulated phishing attack types

| Drive by | Data entry | Business Email Compromise (BEC) | Spearphishing | Social engineering | Malware and malicious attachments |

INFOSEC IQ

A smarter way to manage your program

Mature & refine your program with actionable data

Measure your organization's compliance score, phish rate, reported emails and more to share progress with stakeholders, prove success and identify knowledge gaps before breaches occur. Dive deeper by monitoring campaign auto-reports and learner risk scores to inform ongoing efforts and mature your security awareness program.

Save time with integrations & automation tools

- ✓ Sync with Active Directory to manage learners and utilize dynamic groups to personalize education

- ✓ Stream Infosec IQ training modules from your learning management system (LMS) with SCORM packages

- ✓ Integrate your endpoint protection to deliver training the moment it blocks a security event

- ✓ Connect with your identity provider to authenticate employees via SSO or deliver a universal training link

- ✓ Build your own custom integrations using our Open API

About Us

At OFMQ, we have partnered with InfoSec to meet your IT education and training needs. InfoSec believes knowledge is the most powerful tool in the fight against cybercrime, and that is one of the many reasons OFMQ has partnered with them. InfoSec is considered the industry leader in certification and skills development training for IT and security professionals, as well as employee security awareness training and phishing simulations.
