OFMQ Spotlight

Security Risk Management

OFMQ has been providing Security Risk Management solutions within the healthcare sector for over 10 years.

Specifically, OFMQ has helped covered entities and business associates comply with HIPAA Security Rule requirements by performing risk assessments, developing policies & procedures, delivering security awareness training, and providing full-service risk management support.

OFMQ provides the following resources:

- Risk Assessments
- Policies
- Procedures
- Security Training
- Security Reminders
- Security Controls
- Technical Consulting
- Phishing
- Personnel

OFMQ Security Risk Management Solutions

The Importance of Risk Management in all Facets of Healthcare - Blog Post

Failure to manage identified risks is one of the most common HIPAA violations penalized by the Office of Civil Rights. OFMQ has helped organizations implement a formalized and continuous process for responding to and managing risks identified during the risk analysis.

Evidence on the Growing Use of Health IT to Address the Opioid Epidemic

Recent efforts, such as mandating use of EPCS technology and integrating PDMPs into electronic health record (EHR) systems, aim to improve prescribing practices by increasing the utility of information contained in PDMPs and decreasing prescription diversion and doctor shopping.

Learn About This Year's Medicare Promoting Interoperability Program Requirements with the 2023 Program Specification Sheets

As you prepare to participate in this year's Medicare Promoting Interoperability Program, the Centers for Medicare & Medicaid Services (CMS) would like to highlight its requirements and share the program's 2023 specification sheets. The specification sheets provide participating eligible hospitals and critical access hospitals (CAHs) with a guide to the

program's measures, scoring details, and additional resources.

American Heart Month

One of the leading causes of heart disease is uncontrolled high blood pressure.

Almost half of American adults have high blood pressure, and many don't know it. Most of the time high blood pressure (HBP, or hypertension) has no obvious symptoms to indicate that something is wrong, but HBP can lead to heart attack, stroke, and kidney failure.
